Let's Start!

How do objects communicate with each other?

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.
Give detailed information related to UML and common related topics.

Ask your partner:

- What are the advantages of showing interactions between objects in software modeling? Explain.
- Is it important to see how diagrams work together? Why? Why not?

Can Do Statements:

- I can explain how the communication diagram works..
- I can give details about communication diagram.
- I can identify key features related to communication diagram.

Let's Explore!

Two coworkers discuss how convenient communications diagrams are for their current project.

Instructions: Read the text below.

- Joe:** Denise, I am still trying to figure out what the most convenient diagram for our next project is. Can you help me?
- Denise:** I was going to ask you that! I was checking some documents, and apparently, we need to find a way to control the way different objects work towards a goal, right?
- Joe:** Yes. We need to have a bird's eye view of how they work together. I guess we can use collaboration diagrams; don't you think?
- Denise:** I agree with you, Joe. However, that's the name they had in UML 1.x. Nowadays, their name is communication diagrams. As you said, we might use them to keep a closer view on the way objects assume roles and associate in a given project.
- Joe:** I see. That's the name they have in UML 2.x. Anyway, I was checking some more information about them, and it says that they are similar to sequence diagrams. Is that right?
- Denise:** Pretty much, though we will be paying more attention to the roles that each object will have, and their notation is slightly different from the one we use in sequence diagrams.
- Joe:** Good. So, how will we be organizing messages in these diagrams? I was expecting to use numbers.
- Denise:** You might use both numbers and letters when organizing the messages that each object is going to send. Logic is essential at this point because every message should have a reply and follow an order.
- Joe:** That sounds perfect! I'm considering this kind of diagram. We were discussing the way we will be creating communication links between the different objects, and I think communication diagrams links might be more effective than sequences.
- Denise:** I agree. Let's get to work, then!

**Let's Practice!**

Our company is using communication diagrams.

Instructions: Circle the mistakes in the paragraph.

We are used communication diagrams for this project. Also, we are use them to know the way objects work together. The assistant is checks some information because they have similar characteristics to sequence diagrams. Finally, the team are implementing numbers and letters to organize messages in each object.

**Let's Practice!****Key Features of Communication Diagrams**

Instructions: Select the correct answer in order to complete the sentences.

1. Companies might _____ a birds-eye view when checking on the diagrams.
 - a. needing
 - b. need
 - c. needs
2. Collaboration diagrams might _____ the same than communication diagrams.
 - a. is
 - b. was
 - c. be
3. You might _____ numbers and letters to send the messages.
 - a. uses
 - b. used
 - c. use
4. Every message might need to have a _____ and follow an order.
 - a. reply
 - b. call
 - c. diagram
5. _____ diagrams might be more effective than sequence diagrams.
 - a. Communication
 - b. Class
 - c. Sequence

Extension Activity

Let's talk about communication diagrams!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about communication diagrams.
- Make a brochure explaining main characteristics of communication diagrams.
- Explain how a communication diagram works.
- Get ready to present your brochure and ideas in class.

Self-Assessment

Yes

No

- I search for information about communication diagrams.
- I create a brochure on communication diagrams.
- I explain how a communication diagram works.
- I share my findings with my partners.

☐ ☐
☐ ☐
☐ ☐
☐ ☐

Target Words

- towards** (preposition): in the direction of or with regard to
e.g. We need to find a way to control the way different objects work towards a goal, right?
- bird's-eye view** (expression): to see something in perspective or take an overall look at something.
e.g. We need to have a bird's-eye view of how they work together.
- associate** (verb): to assemble, to put together or to accumulate
e.g. We might use them to keep a closer view on the way objects assume roles and associate in a given project.
- slightly** (adverb): a little, fairly or justly
e.g. Their notation is slightly different from the one we use in sequence diagrams.
- reply** (noun): to answer or to send a response
e.g. Logic is essential in this point, because every message should have a reply and follow an order.
- agree** (verb): to concur, to coincide or to correspond
e.g. I agree. Let's get to work, then!

Learning Points

Continuous Tenses

You can use continuous tenses in English to refer to actions in development or that are taking place in a specific period of time.

Present Continuous You use it to talk about actions happening at the moment of speaking

Follow this structure to make sentences in present continuous:

subject + verb to be (am/is/are) + main verb (ing form) + complement

Example:

I'm reviewing some notes on the features of communication diagrams.

For negative sentences use this structure:

subject + verb to be (am/is/are) + not + main verb (ing form) + complement

Example:

We **are not using** the notation from UML 1.x anymore

If you want to make question in present continuous, you should use this structure:

verb to be (am/is/are) + subject + main verb (ing form) + complement + ?

Example:

Are you using collaboration diagrams?

Past Continuous

You use this tense to talk about actions that took place in the past during a period of time.

Use this structure to make affirmative sentences in the past continuous:

subject + verb to be in past (was/were) + main verb (ing form) + complement

Example:

We **were following** the diagram when the boss decided to change it.

When making negative sentences in past continuous, use this structure:

subject + verb to be in past (was/were) + not + main verb (ing form) + complement

Learning Points

Example:

She **was not using** the standard notation until I asked her to.

When you want to make a question using past continuous, you can use this structure:

verb to be in past (was/were) + subject + main verb (ing form) + complement + ?

Example:

Was she using UML last night?

Future Continuous

You can use this tense to talk about actions the will take place during a period of time in the future.

Follow this structure when making affirmative sentences:

subject + will + be + main verb (ing form) + complement

Examples:

We **will be doing** an update to the diagrams we use.

Here's the structure to make negative sentences

subject + will + not + be + main verb (ing form) + complement

Example:

They **will not be using** this diagram for the following projects.

If you want to make questions using future continuous, you can follow this structure:

HERE

Example:

Will **he be using** communication diagrams?

Examples

- *I am still trying to figure out what the most convenient diagram for our next project is.*
- *I was checking some documents, and apparently we need to find a way to control the way different objects work towards a goal, right?*
- *Though, we will be paying more attention to the roles that each object will have; and their notation is slightly different from the one we use in sequence diagrams.*

Learning Points

Modal Verbs (Review)

Modal verbs allow you to give different nuances or shades of sense when used with other verbs.

You can use the modal verb **Might** to express future possibilities that are not very likely to happen, or that have a low probability of becoming a reality.

In order to use the modal verb **Might**, you need to follow this structure:

subject + might + main verb (base form) + complement

Examples:

The communications diagram **might** require many adjustments.
You **might** need to use more detailed instructions.

Examples

- *We might use them to keep a closer view on the way objects assume roles and associate in a given project.*
- *You might use both numbers and letters when organizing the messages that each object is going to send.*
