Let's Start!

UML: is it good enough?

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.
Give detailed information related to UML and common related topics.

Can Do Statements:

- I can give examples related to UML and different alternatives.
- I can explain why UML is not sufficient in certain cases.
- I can describe the cases where UML is not sufficient.

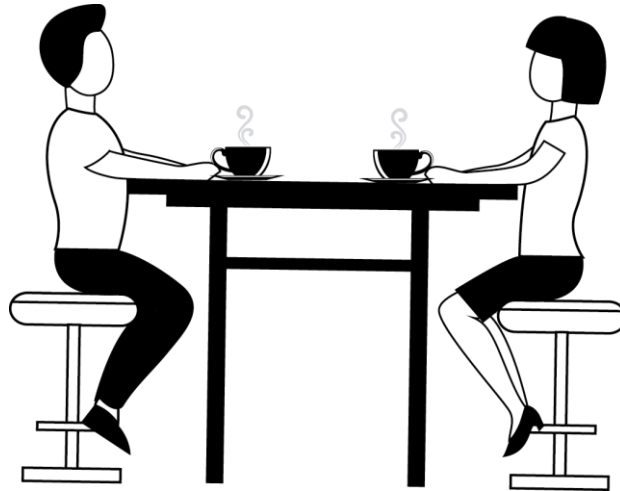

Ask your partner:

- Do you follow modeling languages when writing software? Which one or ones?
- Are modeling languages necessary? Why? Why not?

Let's Explore!

Two friends are talking about UML.

Instructions: Read the text below.

- Michelle:** I see that you really enjoy doing models with UML, right?
- Jack:** Well, I'm currently planning to create a piece of business software, but I'm still trying to find a suitable modeling technique.
- Michelle:** That's exactly what I wanted to tell you, in my company we realized that UML is great, but it has shortcomings.
- Jack:** In mine, we're still following it thoroughly, but in this case it's not working. I have an idea of what I want the software to be like, but following the steps of unified modeling language is leaving some aspects behind.
- Michelle:** I know what you're saying. There are many modeling alternatives available in the industry. However, I had this colleague who tried to use her own modeling, but it created some difficulties in semantics because it wasn't like ours, so we had to "translate" what she meant.
- Jack:** I think it's the problem with UML too, sometimes it doesn't allow programmers to explore other alternatives when developing software, and so creativity or dealing with other important elements in a different order might impair the process.
- Michelle:** I see. That reminds me of an occasion when one of my coworkers wanted to focus on the user interface of an application in an early stage, but with UML it wasn't possible. And a friend of mine told me that her company was using UML for business processes!
- Jack:** Some friends told me they were doing that in theirs too, when it's clearly not its purpose.
- Michelle:** Besides, there are people who would like to have executable UML to save time; that's not going to happen soon. There are so many UML models that it'd be difficult to see all of them in a single software; it would also have to support proprietary models. It's too complex!

**Let's Practice!**

Mine is better than UML.

Instructions: Select the correct answer in order to complete the sentences.

1. That new program is _____, I created it.
 - a. your
 - b. him
 - c. mine
2. She is creating great modules with different languages, yours with UML are not as good as _____.
 - a. its
 - b. yours
 - c. hers
3. Our company has more contracts than yours, because _____ uses more than UML, we also use other tools.
 - a. ours
 - b. his
 - c. hers

**Let's Practice!**

I'm not using UML

Instructions: Read the sentences. Write the missing word(s) in the blank. Use: shortcomings, semantics, modeling techniques, proprietary model, purpose.

1. We are presenting some _____.
2. You're not considering the _____.
3. Are you applying other _____ _____?
4. He's designing a _____ _____.
5. For what _____ are we using UML?

Extension Activity

Further than UML

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Research on other representation method for specific purposes.
- Write examples of why to use that method instead of UML using the present continuous.
- Share with my partners.

Self-Assessment

Yes**No**

- I talk about the functionalities of different languages besides UML.
- I write about why to use another method in present continuous.
- I share my findings with my partners.

☐ ☐☐ ☐☐ ☐

Target Words

- **impair (verb):** to damage, to harm or to spoil
e.g. I think it's the problem with UML too, sometimes it doesn't allow programmers to explore other alternatives when developing software, and so creativity or dealing with other important elements in a different order might impair the process.
- **purpose (noun):** objective, goal or aim
e.g. Some friends told me they were doing that in theirs too, when it's clearly not its purpose.
- **proprietary model (noun):** a personal or customized model
e.g. There are so many UML models that it'd be difficult to see all of them in one single software; it would also have to support proprietary models. It's too complex!
- **currently (adverb):** at the moment, now, at present
e.g. I'm currently planning to create a piece of business software, but I'm still trying to find a suitable modeling technique.
- **shortcoming (noun):** disadvantage, limitation or deficiency
e.g. That's exactly what I wanted to tell you, in my company we realized that UML is great, but it has shortcomings.
- **semantics (noun):** the study of meaning in structured language
e.g. I had this colleague who tried to use her own modeling, but it created some difficulties in semantics because it wasn't like ours, so we had to "translate" what she meant.

Learning Points

Present Continuous (Review)

You can use the **present continuous tense** to talk about actions that happen at the moment of speaking or for future plans.

If you want to say that something is happening right now, or at the time of speaking, you use the **present continuous**, follow this structure to make affirmative sentences:

Subject+ verb to be (am/is/are) + verb (-ing form) + complement

Examples:

*I'm **trying** to find other alternatives apart from UML.*

*We're **working** on new modeling languages.*

If you want to make negative sentences you can use this structure:

Subject + verb to be (am/is/are) + not + verb (-ing form) + complement

Examples:

*She's **not following** the modeling scheme!*

*They're **not making progress** on the software.*

The structure changes a little when making questions in present continuous; here's the structure:

verb to be (am/is/are) + subject + verb (-ing form) + complement

Examples:

***Are** you **using** the modeling scheme we proposed?*

***Is** UML **providing** you with the necessary tools?*

Examples

- *Well, I'm currently planning to create a piece of business software, but I'm still trying to find a suitable modeling technique.*
- *In mine, we're still following it thoroughly, but in this case it's not working.*

Learning Points

Possessive Pronouns

You use **Possessive pronouns** to make reference to something that you mentioned previously, they help you avoid repetition of possessions, thus improving your fluency.

These pronouns help you to refer to an object that belongs to someone, but the speaker mentioned it before in the conversation.

Example:

John: *My company doesn't use the UML.*

Danny: *That's strange. **Mine** loves it!*

Danny talks about his Company, but he does not repeat the word *Company* because John used it before.

The purpose of these pronouns is to avoid repetition of concepts that both speakers know about.

Example:

*I know they use very efficient models, but **ours** are more object oriented.*

Remember, possessive adjectives and different and ALWAYS require you to use the object you possess. But possessive pronouns do not.

Example:

His diagram looks messy, but **my** is better. Incorrect!

His diagram looks messy, but **mine** is better. Correct!

Here is a list of both possessives (adjectives and pronouns):

Possessive adjectives	Possessive pronouns
My	Mine
Your	Yours
His	His
Her	Hers
Its	Its
Our	Ours
Their	Theirs

Learning Points

Words Endings "ant - ent"

Sometimes these word endings might cause confusions, because both word endings can be used in adjectives and nouns. However, if you pay close attention to them, you will be all right!

You need to be careful with the spelling, because sometimes the pronunciation might appear to be the same, but the words are written differently.

In the box below, you will find some of the most common words that end in *Ent* or *Ant*, particularly nouns and adjectives.

Ant		Ent	
Adjectives	Nouns	Adjectives	Nouns
Constant	Accountant	Absent	Accident
Dominant	Consultant	Coherent	Component
Elegant	Stimulant	Evident	Document
Important	Assistant	Imminent	Parent
Significant	Defendant	Permanent	Recipient

Example

- *So creativity or dealing with other important elements in a different order might impair the process.*
